TechTime with Tim

OSA technology

Your clients are already using software that help them with…

- Access control
- Rules based printing
- Cost accounting
- Document management
- Fax Servers
- Rules based printing
- Workflow
- Security

What if you suggested they use Sharp OSA technology to seamlessly integrate the Sharp MFP with their existing software?

Imagine when renewal time came on their MFP fleet and their office workflow now "required" a Sharp MFP to function.

➢ Competition elimination!

Login to the Sharp Reseller website and click on Sharp OSA Technology.

HOW DOES IT WORK?

- Example, scanning into a Document Management Software.
    - On the Sharp MFP, Touch OSA
    - Select the software App
    - input the required data for filing
    - press send
- In this example the document will scan directly into the client's software and be filed using the required data. Likewise it can be recalled and printed from the MFP as well.
